

GURPREET SINGH

IT Architect, PublicisSapient
gurupreetsingh2000@gmail.com

Summary

I am working on FullStack based projects, where I design architecture of applications and organise teams. Beside my usual work I do photography as well. My main focus is always to build reusable components using web-components approach. I mainly use ReactJS for frontend development solution along with ReduxJS.

Experience

Recommendations

Simone Krautter

August 3, 2017, Gurpreet worked with Simone in the same group

"I had the pleasure working with Gurpreet on one of the largest projects at SapientNitro/SapientRazorfish. He moved all the way from India to Germany to build a "bridge" between the Tech Team and the UX Team. I loved working with him - always up for a challenge and with an understanding heart for us Designers and our needs. I heartily recommend Gurpreet, as a great team member/leader and simply as a great man with an inspiring optimism. Hope to see you and work with you again soon!"

Holger Hellinger

March 23, 2017, Holger managed Gurpreet directly

"Gurpreet is a Rockstar. I work with him on a project in Germany and he is the key link between Technology and Creatives. Gurpreet has a deep knowledge of his craftsmanship. When it comes to responsive, mobile first or build processes, he always at the Frontline. He looks beyond his plate and understands quick and with passion. I'm really happy to have such a great developer in my team."

Sourav Sarkar

August 9, 2017, Gurpreet worked with Sourav in the same group

“Gurpreet has, time and again, displayed extreme dedication and focus towards his work, whether it be conceptualizing a prototype with all its uncertainties, ironing out a major piece of code under pressure, or taking the lead in facilitating and participating in critical discussions at any time of the day. He is one of those upon whom I can completely rely on to put his best efforts to make the design come alive, even if it means a lot of toil from a front-end dev perspective.

With our last project as demanding and ambitious as Siemens, it is only normal to expect friction between design and development teams. He has been a much-needed and critical liaison between the design and front-end development teams in this scenario. Gurpreet has been of major help here, being always available to talk things out and facilitating conversations between project members.

And this quality of his has spanned continents, demanding major time and effort. Many a time, he is even available on a one-to-one basis over Hipchat and even WhatsApp to talk about any issues and help needed. He has never shirked away from these efforts...and that needs major dedication and passion for your work.

In all the projects, I have worked in with Gurpreet, he has always stopped by to ask about the 'philosophy' behind the design (read 'story'), and has then done the best to his capacity (read 'technology'). Many a time he has stepped forward and suggested valuable alternatives, providing a different dimension to our ideas. This confluence in his thoughts has time and again brought about positive outcomes in final deliverables. Apart from all that responsibility, he maintains a very positive outlook towards situations and expectations which, in itself, is almost infectious. It's always a pleasure to work with Gurpreet and witness the great results of his dedication and play a part in it. Keep up the great work, Gurpreet. Way to go!”
